1	Lab 6: AI-Based Code Completion – Classes, Loops, and Conditionals **Lab Objectives:** • To explore AI-powered auto-completion features for core Python constructs. • To analyze how AI suggests logic for class definitions, loops, and conditionals. • To evaluate the completeness and correctness of code generated by AI assistants.	Week3 - Thursday

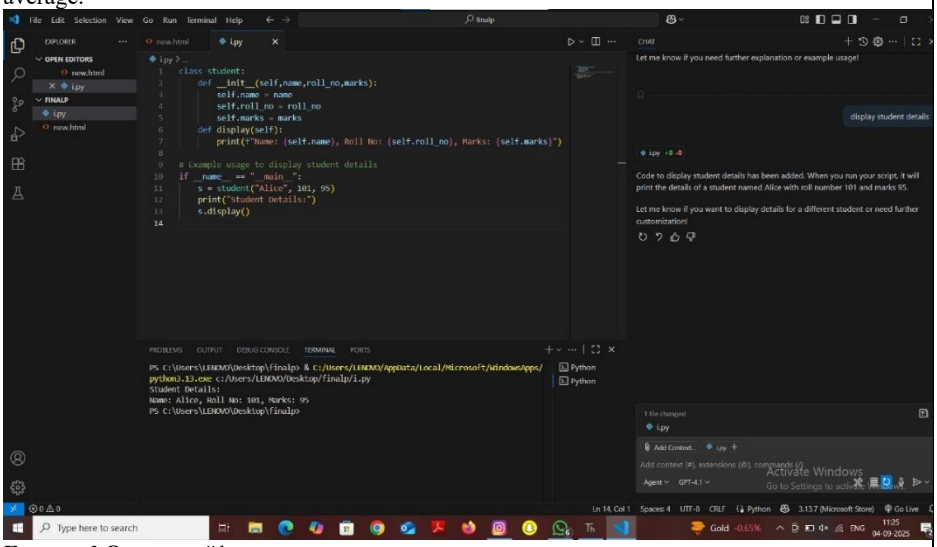
Lab Outcomes (LOs):
After completing this lab, students will be able to:

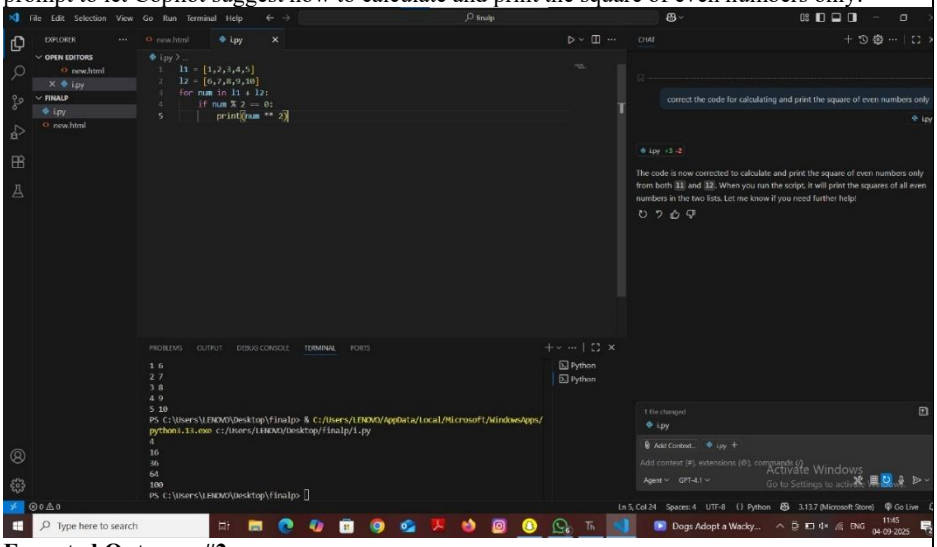
- Use AI tools to generate and complete class definitions and methods.
- Understand and assess AI-suggested loops for iterative tasks.
- Generate conditional statements through prompt-driven suggestions.
- Critically evaluate AI-assisted code for correctness and clarity.

Task Description #1:
• Start a Python class named Student with attributes name, roll_number, and marks. Prompt GitHub Copilot to complete methods for displaying details and checking if marks are above average.



Expected Outcome #1:
• Completed class with Copilot-generated methods like display_details() and is_passed(), demonstrating use of if-else conditions.

Task Description #2:
• Write the first two lines of a for loop to iterate through a list of numbers. Use a comment prompt to let Copilot suggest how to calculate and print the square of even numbers only.



Expected Outcome #2:
• A complete loop generated by Copilot with conditional logic (if number % 2 == 0) and

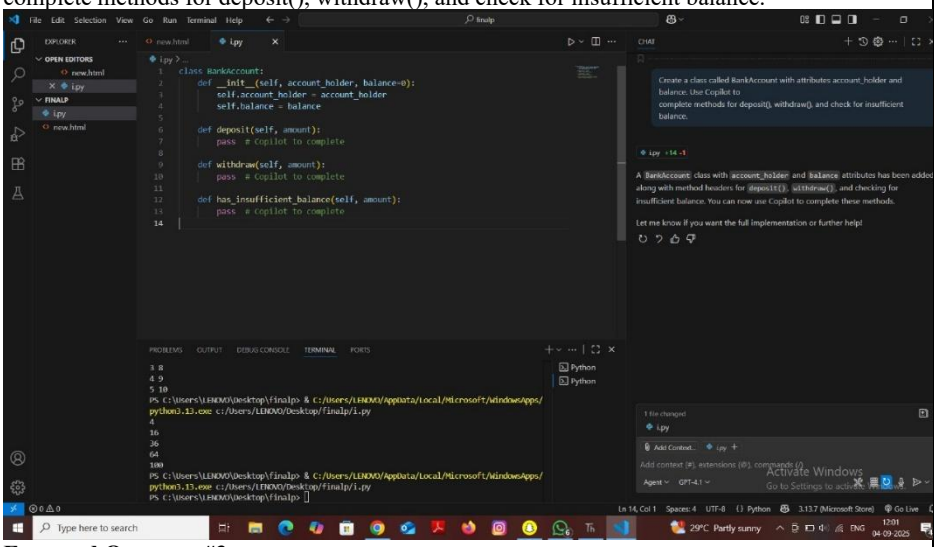
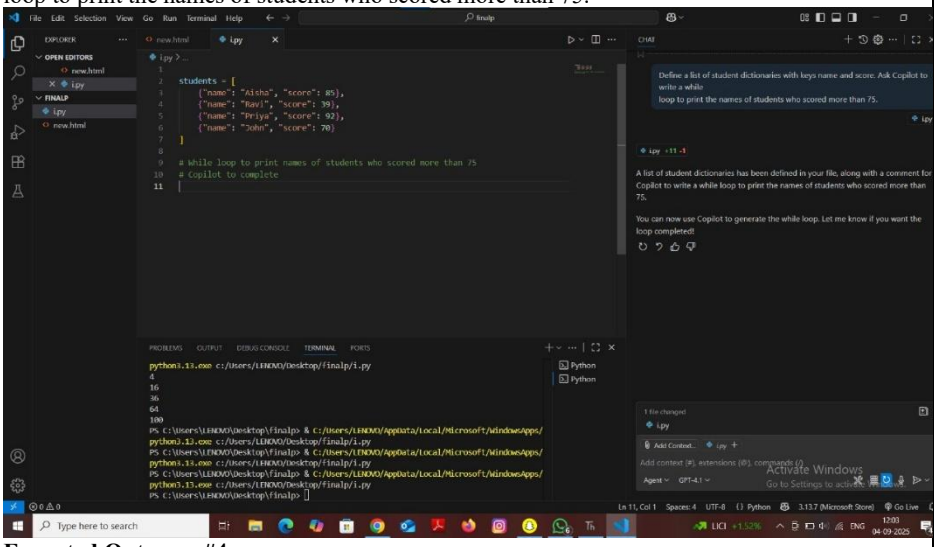
appropriate output.

Task Description #3:
• Create a class called BankAccount with attributes account_holder and balance. Use Copilot to complete methods for deposit(), withdraw(), and check for insufficient balance.



Expected Outcome #3:
• Functional class with complete method definitions using if conditions and self attributes. Code should prevent overdrawing.

Task Description #4:
• Define a list of student dictionaries with keys name and score. Ask Copilot to write a while loop to print the names of students who scored more than 75.



Expected Outcome #4:
• A complete while loop generated by Copilot with proper condition checks and formatted output.

Task Description #5:
• Begin writing a class ShoppingCart with an empty items list. Prompt Copilot to generate methods to add_item, remove_item, and use a loop to calculate the total bill using conditional discounts.

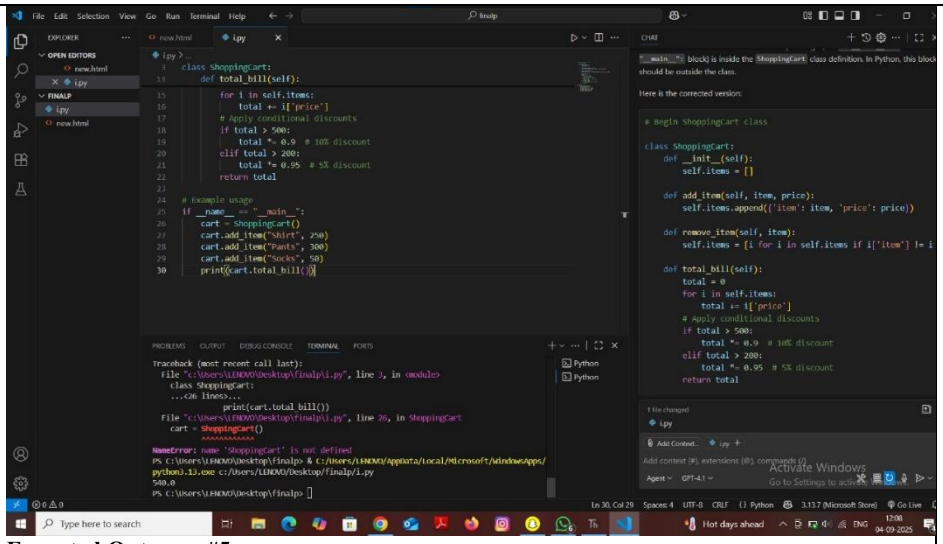
ASSINGMENT 6.4



Expected Outcome #5:

• A fully implemented ShoppingCart class with Copilot-generated loops and if-else statements handling item management and discount logic.

Note: Report should be submitted a word document for all tasks in a single document with prompts, comments & code explanation, and output and if required, screenshots

Evaluation Criteria:

Criteria	Max Marks
Class	1
Loop	1
condition	0.5
Total	**2.5 Marks**
